2017 Research Programme

DWG members have exclusive access to our extensive research library, including reports on key topics such as collaboration, strategy and governance, future trends and many more.

Our members regularly use our research for decision making, as a source of ideas and as the basis for rich interactions and knowledge sharing.

We publish around six research papers a year, most available exclusively to members. Recently published research includes hugely popular reports like “Evidence-based Intranet Success” and “Understanding the Relationship between Organizational Culture and the Digital Workplace”.

- You can download free reports and executive summaries in the Resources area of our website.
- To take advantage of this rich knowledge, contact us to join DWG today.

In 2017 we will investigate seven core areas of intranet practice via our best practice research programme and also cover a wide range of other topics through online and face-to-face meetings.

2017 Topics

The future of the workplace

What will the digital experience of work look and feel like in 2025? What will be a typical “day in the life” of a digitally enabled worker?

This thought leadership report will take a holistic view of the future workplace and experience of work, focusing on the intersection between physical and digital workplaces. It will explore perspectives from a range of leaders, mapping out the key features of the future landscape of work as well as their implications for digital workplace practitioners now.

Related research:

Knowledge management in the digital workplace

Knowledge management (KM) is alive and well and a key component of the evolving digital workplace. This research will provide practitioners with an understanding of the role of KM in the digital workplace, and enable them to gain key learnings from the field of KM that are relevant to their roles.

It will examine questions such as: What are the barriers to knowledge “flow” in the fragmented digital workplace? What is the potential for a major shift in knowledge worker productivity in the digital workplace? How and to what extent should KM and digital workplace strategies be aligned?

Related research:
- The Art of Collaboration: Optimizing online collaboration for success (2013)
- Using the Intranet to Achieve Operational Excellence (2011)
Achieving digital workplace integration

Is a fully integrated digital experience of work an achievable goal or just a utopian dream? And, if achievable, is it desirable?

This research will build on DWG's user experience research track to explore the integration challenge faced by most organizations embarking on a digital workplace programme of work. It will explore challenges and opportunities posed by the proliferation of tools and applications, increasing fragmentation, company provided vs. Bring Your Own, company hosted vs. cloud, pressures from consumer technology, use of open APIs – and more.

Related research:
- Setting Up a User Experience Programme (2017)
- One Company Intranet: Moving from many intranets to one (2011)

Adoption strategies

DWG research relating to adoption is consistently popular among members, covering topics such as change management, organizational readiness, user-centred design and culture.

This paper will build on previous research to analyse what factors contribute to a successful adoption strategy and approach for digital workplace initiatives. It will provide practitioners with a “psychology 101” of key theories and frameworks for understanding how and why users do or don’t adopt new technologies.

Related research:
- Change Management for the Intranet and Digital Workplace: Bringing the organization with you (2014)
- Understanding the Relationship between Organizational Culture and the Digital Workplace (2015)

Best practices for content strategy

This research will build on “Managing Intranet Content”, one of the top three most popular reports in the DWG research library, to re-examine the content strategy from a digital workplace perspective.

It will tap into industry good practice to address challenges such as aligning content platforms, dealing with multiple languages, achieving global-local balance, ensuring user needs help drive content, auditing and analytics – and more. The research will explore key practices for establishing an effective content strategy for the digital workplace.

Related research:
- Managing Intranet Content: A good practice guide (2014)
- Digital Channels Matrix: Creating employee-focused internal communications (2014)
- The Personalized Intranet: Using personalization and customization to optimize user experience (2016)
Leadership in the digital workplace

Being digital workplace “savvy” is a critical component of 21st century leadership; and strong digital leadership is essential to digital workplace success.

This research will provide leaders with a comprehensive overview of what they need in order to:

- lead in the digital workplace – including skills, principles and leadership style
- lead the digital workplace – including understanding and evaluating the landscape and establishing the programme.

It will include leadership “spotlights” to highlight good practice as well as self-assessment tools for leaders.

Related research:

- Becoming a Digital Workplace Leader: The big shift from intranet management (2014)

Defining and implementing mobile strategy

Without a comprehensive mobile strategy, the potential of the digital workplace to enable an anywhere, anytime workplace is hampered by partial or tentative efforts at mobilization.

In 2016, 52% of DWG members said that the intranet is available on both company-provided and employee-owned devices, while 27% said it is available on company-provided devices only. Although many organizations are making progress with mobile, particularly in terms of empowering employees at the frontline, an opportunity exists to accelerate practice.

This research will explore approaches to delivering mobile services to the workforce.
